Archive Recovery Log - June/July 2019

Document: IR 19-06 **Revision:** A **Issue:** 2019-07-29 **Status:** Reconstructed

Archive note. This document is retained as part of the surviving KRYSS pilot-programme record. Values are experimental and are not commercial specifications.

Abstract

Sanitised reconstruction of the document-recovery inventory created after the June 2019 file-encryption incident. It records archive condition only and contains no operational contact details.

Recovery scope

Printed binders, isolated removable media and previously exported PDF copies were inventoried separately from affected workstations.

Files recovered from uncertain sources were not returned to active engineering systems during the initial inventory.

Archive categories

Records were classified as recovered, partial, index-only or not recovered. The later public archive preserved these states instead of silently recreating missing material.

Recorded parameters

Category	Meaning	2019 handling
Recovered	Usable copy survived	Indexed
Partial	Incomplete copy survived	Retained with note
Index only	Reference survived	No public file
Not recovered	No usable copy	Marked unavailable

Continuation

Historical note

A ransom note was retained as incident evidence. Public copies remove contact addresses, links and victim identifiers. No recovery service or payment mechanism is associated with the surviving archive.

End of recovered document.
